STATE OF THE ART ROASTING CAPABILITY AND SUSTAINABILITY

- Our coffee is roasted using an RFB - Rotational Flexible Batch Process to create a more consistent flavour.
- A state of the art carbon capture process used during the roasting operation significantly lowers the carbon footprint.
- We use convection roasting as it provides greater control of the roast, allowing a more consistent flavour cup after cup.
- Our roastery has 30 years worth of experience in creating sustainable supply chains.
